

Introducing RiveTier III®

The Original boltless is now Compatible with most other boltless products

“Western Pacific's new RiveTier III product looks good and it's compatible with Rapid Rack and Jaken.”

– Larry Gonzalez of Conveyor & Storage Solution

Now everyone can have it

It's easier than ever to employ Western Pacific's premier RiveTier® boltless shelving systems. **The new RiveTier III®** systems are compatible with major boltless products, making integration with existing units a snap. The units incorporate seamlessly with other makes, yet retain the RiveTier® product family's superior engineering.

Businesses often have trouble finding additional space for high-capacity record and file storage. RiveTier® III systems maximize cubic feet in an existing space—an environmentally sensitive approach.

WPSS, known for innovative solutions to problematic material handling requirements, recognized that end-users who wanted to utilize Western Pacific's trail-blazing boltless shelving were disadvantaged if they used another brand. With RiveTier III®, everyone can benefit from The Original boltless.
