## DRIVING SUCCESS: Eagle and Western Pacific Storage Systems team-up in the automotive trade

Serving multiple trade sectors for over 30-years, Mike Burk, founder of Dallas-based Eagle Storage Systems, credits his success in part, to treating each customer's business as if it were his own. In addition to offering a range of shelving and rack solutions, Eagle Storage assists clients by maintaining and adjusting their custom systems.

Mike also builds on Eagle's success by forging strategic partnerships with other leaders in the material handling industry, including Western Pacific Storage Solutions ([www.WPSS.com](http://www.WPSS.com)). Western Pacific's RiveTier® original boltless shelving systems have become an industry standard for many applications, and Mike uses RiveTier® exclusively for many of his customers in the automotive trade.

Mike explains: "RiveTier® is the standard. I recommend it exclusively because of the system's innate flexibility, its structural characteristics, and the value that Western Pacific builds into their products. RiveTier® helps my experienced crews provide clients with a fast turnaround. In the auto parts business, speed is crucial; using RiveTier® shelving gives our teams the ability to be more imaginative when helping auto parts stores maximize rear-store space."

To allow stores to stock the most parts within the smallest usable profile, Mike regularly installs two-level, catwalk/mezzanine (or platform) structures. One installation required Eagle

project teams to construct a 3600 square foot parts facility right underneath a large structural mezzanine. This space-maximizing outcome can be utilized in a wide range of auto parts storage structures and in warehouse applications.

In addition, the Eagle Storage System teams can get franchisees up to speed quickly because of select RiveTier® features:

- Completely boltless shelving offers maximum configuration flexibility
- No bolts mean rapid, no-hassle assembly time
- Heavy-duty posts available for catwalk applications
- All components ship to job site in a fully-accessorized

package ready for assembly. The only tool required is a rubber mallet.

### How does the end user benefit?

- No sway or cross-bracing means employees have four-side access to product
- RiveTier® can handle long spans, and low-profiles.
- Value. Installation costs are typically 30%-40% lower than bolted shelving
- Common T-posts allow storage systems to grow with the business
- Specialty systems are available for battery, tire, and muffler rack storage.
- Western Pacific's unflagging commitment to client satisfaction.

Mike Burk's various auto parts store clients keep coming back to Western Pacific's RiveTier® line for its versatility, value and quality. Customers also benefit from the fact that Eagle Storage Systems, and Western Pacific Storage Solutions both operate in an atmosphere that is customer-centric. They get it. The commitment to the customer drives their successful relationship.

**WPSS' CEO Tom Rogers said,** "It's always a pleasure to do business with vendors who really understand the needs of their customers from the ground up. Mike's industry experience gives him perspective, and his product selection means greater flexibility and value for his clients."

**Kevin Wolf, WPSS' regional sales manager continued,** "The fact that so many of Mike's crew have worked together for numerous years contributes to Eagle's success and stability. 30-years of success in an industry like ours doesn't happen by accident."
