

# RiveTier III

## Boltless Shelving

- No bolts, no tools, no hassle!
- Open design eliminates bracing for full accessibility
- Economical choice for medium to heavy-duty shelf capacities
- Build as stand-alone units or as connected runs of shelving
- Easily reconfigure, relocate, or expand as needs evolve

### A Smarter, Stronger Boltless Design

The RiveTier III shelving system delivers the strength of steel with the simplicity of boltless assembly. Its rivet-and-slot design locks securely into place without the need for nuts, bolts, or tools. This allows for rapid installation and long-term stability. It is also ideal for growing warehouses and facilities looking to minimize downtime during setup or reconfiguration.

### Engineered for Efficiency

Each RiveTier III component is precision-formed for consistent fit and strength. Uprights and beams connect effortlessly, creating a solid, wobble-free structure capable of handling heavy-duty storage demands. The boltless connection also allows shelf levels to be adjusted in 1-1/2" increments, providing the flexibility to store products of varying sizes and weights without redesigning your layout.

### Four-Sided Access for Better Workflow

With no cross-bracing or back panels required, RiveTier III shelving allows full access from all four sides offering a major advantage in dynamic environments. This open design improves visibility, speeds up picking, and allows forklifts or carts to reach items from any direction, improving overall workflow and safety.

### Built for Space Optimization

For operations needing more storage density, the optional Z-Beam configuration provides a low-profile beam that increases vertical shelf capacity while maintaining strength. Whether you're expanding up or out, RiveTier III helps you get the most from your available space.

### Adaptable for the Long Run

RiveTier III grows with your business. Its modular design lets you expand, relocate, or reconfigure with minimal effort. From small parts storage to large bulk handling, this system is built to evolve with your changing storage needs.

# RiveTier III

## Boltless Shelving

- 40% less expensive than most standard metal shelving options
- Heavy-duty or low-profile applications
- Widths 48" to 96"
- Depths 12" to 48"
- Heights up to 144"
- Decking options include wire, particle board, solid steel, & more!
- Heavy-duty options available to store up to 1,000 lbs per shelf

### Angle and T-Posts

RiveTier posts feature a keyhole design that allows beams to be adjusted on 1-1/2" centers. Use angle posts on the ends and t-posts in between to connect several units together.

### Beam Options

Double rivet beams offer a high storage capacity for bulky items. Low-profile beams help maximize every bit of vertical space when storing small products.

### Decking Options

Easily add decking to each level of your RiveTier. Options include wire, particle board, solid steel, and more!

### Re-imagine Your Space Today!

RiveTier Boltless Shelving assembles quickly and easily using only a rubber mallet. This open shelving offers access to your materials from all sides for efficient loading and unloading.

Let's plan a layout today that adapts to your tomorrow. We provide layout guidance, spec sheets, and recommended best-practice clearances for storage and picking access to ensure an efficient and space saving design.
